Word count: about 8 690 words in total (Word count of the .docx file), including abstract, references, tables and figure legends; main text about 6 370 words. The length is justified in the cover letter.

Acknowledgements. The author thanks the Norwegian Athletics Federation, whose systematic registration of competition results over decades makes population research of this kind possible.

CRediT authorship contribution statement. Atle G. Guttormsen: Conceptualization, Data curation, Formal analysis, Methodology, Software, Validation, Visualization, Writing – original draft, Writing – review & editing.

Declaration of competing interests. The author declares no financial or personal relationships that could inappropriately influence this work. The author maintains an open, non-commercial statistics platform built on the Norwegian Athletics Federation's public results database.

Funding. This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

Ethics. The study is not medical or health research under Norway's Health Research Act and did not require approval by a Regional Committee for Medical and Health Research Ethics. Sikt (the Norwegian Agency for Shared Services in Education and Research) confirmed that the use of the data raises no data-protection concerns. No participants were contacted; the data are public competition results.

Related work by the author. Three earlier studies of the same registry are cited in the manuscript (one published, one in press, one under review). The present manuscript reports a different exposure, a different sample and pre-specified hypotheses that none of them tested; there is no overlap in results.
